This paper provides a comprehensive overview of juveniles in detention in Australia from 1981 to 2004. It includes an analysis of the number and rate of juveniles in detention over time (with respect to a number of different variables) as well as a detailed analysis of the financial year 2003-04. Statistics are derived from the Australian Institute of Criminology's (AIC) juveniles in detention dataset; the only national dataset pertaining to juvenile justice currently available in Australia.

The juveniles in detention data set is compiled from reports submitted on a quarterly basis by the relevant juvenile justice authorities in each Australian jurisdiction. These authorities include:

- Department of Juvenile Justice, New South Wales;
- · Department of Human Services, Victoria;
- · Department of Communities, Queensland;
- · Department of Justice, Western Australia;
- Department of Families and Communities, South Australia;
- Department of Health and Human Services, Tasmania;
- · Northern Territory Correctional Services; and
- Department of Disability, Housing and Community Services, Australian Capital Territory.

Each of these authorities was provided with a copy of this paper prior to publication and given the opportunity to comment. It should be noted that although this report provides data on juveniles in detention, the vast majority of juveniles in the care of juvenile justice agencies are not placed into detention but rather community supervision orders and other types of order. It is important to keep this in mind when interpreting the data on juvenile detention in this report.

The data provided by each of the juvenile justice agencies contain information on the number of young people in the custody of the juvenile justice agency on the last day of each quarter in the year; that is, March, June, September and December. Therefore, the census count taken on each of these dates reflects only the number of juveniles in each jurisdiction at that time, and is not necessarily representative of the actual daily average of juvenile detainees in each state or territory. As a result, some jurisdictions, in particular smaller ones such as the Australian Capital Territory, Northern Territory and Tasmania, may show greater variability between quarters. Nonetheless, the census count is the only one currently available in Australia, and is considered a useful method by which to measure the population of juveniles in detention.

The quarterly census provides aggregate information on the number of juveniles detained according to a number of variables including:

- · gender;
- age;
- Indigenous status (Indigenous incorporating both Aboriginal and Torres Strait Islander peoples
 – or non-Indigenous); and
- legal status (remanded or sentenced; Western Australia and Queensland have a further category of "remanded and sentenced", which includes young people under sentence but who are awaiting trial or sentence on other charges. In this report these persons are categorised as sentenced).

Together with the jurisdiction and the date at which the census was taken, there are six factors analysed in this report. However, as the data are reported in aggregate form, the extent of possible analyses is limited.

Differences between jurisdictions

Each Australian state and territory has a separate and distinct formal juvenile justice system, of which detention is one part. There are differences between them which should be acknowledged prior to describing the data. These differences primarily relate to the way in which they (a) define a juvenile offender and (b) manage a juvenile offender (particularly once they reach adulthood). Regarding the first issue, juveniles in Australia are largely dealt with by the juvenile justice system when they are aged between 10 and 17 years. However, three states define juvenile offenders differently: Victoria, Queensland and the Northern Territory (see Table 1). Victoria is moving to the more common age range of 10-17 with effect from 1 July 2005.

In order to facilitate useful comparisons, this report focuses on detainees aged 10 to 17 years (since this is the most common definition). However in order to provide complete data, Table 1 contains information on persons aged 18 and over in juvenile detention centres in Australia, at 30 June 2004. Excluded from the table and the results presented in this report are those young people aged under 18 in adult prison. Thirty-nine persons aged under 18 were in adult prison at 30 June 2004, and thirty-four of these were in Queensland¹.

Table 1: Jurisdictional di	Table 1: Jurisdictional differences in the definition of a juvenile at 30 June 2004											
State/Territory	Age of juveniles	Number of persons aged 18 or over in juvenile detention										
New South Wales	10-17	100										
Victoria	10-16	70										
Queensland	10-16	11										
Western Australia	10-17	16										
South Australia	10-17	11										
Tasmania	10-17	2										
Northern Territory	10-17	0										
Australian Capital Territory	10-17	1										

¹ While the ABS has previously reported the numbers of young people in prison by jurisdiction, the *Prisoners in Australia* (ABS 2004a) publication did not report numbers other than the national figure and for Queensland, hence they have not been included in Table 1.

Differences between states are found in the management of older juveniles, particularly with respect to those who have become adults while in detention. New South Wales and Victoria have traditionally detained juvenile offenders in a juvenile detention centre until completion of their sentence, resulting in numerous detainees of an adult age – 100 in New South Wales and 70 in Victoria at 30 June 2004. Legislative changes passed in 2001 by the New South Wales Parliament (Children (Criminal Proceedings) Amendment (Adult Detainees) Act 2001) were intended to reduce this number by enabling corrective services to transfer detainees to prison at 18. However it was reported that only nine young people had been subject to orders resulting from this legislation (NSW Ombudsman 2004). On 1 July 2005, Victoria increased the age jurisdiction for the Children's Court to include 17-year-olds.

Until June 2000, the Northern Territory classified 17-year-olds as adults. This may need to be taken into account when examining historical data on the number of juveniles in detention in the Northern Territory.

Victoria has a dual-track system of adult prison and juvenile detention available for persons aged 17 to 20 years at time of sentencing, with an option for some people in this age group to be placed into a senior youth training centre. The juvenile detention option is not available to this age group purely for remand purposes. Table 1 shows that at 30 June 2004, there were 70 people aged 18 or over in juvenile detention centres in Victoria.

Tasmanian data

The Department of Health and Human Services, Tasmania reported in 2003 that the data relating to Indigenous detainees, provided to and published by the AIC for the years 1996-97 through 2000-01, may be inaccurate, due to the limitations of their previous data system's reporting capabilities. These data are therefore not reproduced here. However, accurate data by Indigenous status have been provided for the years 2003 and 2004 and the relevant information has been included in this publication.

Australian Capital Territory data

Late in 2003, the Office for Children, Youth and Family Support in the ACT reported that the data provided to and published by the AIC for the year 2001-02 overstated the number of juveniles in detention during the four relevant census periods. This affected both the numbers and detention rates for the Australian Capital Territory and marginally affected those for Australia. The correct data have now been provided to the AIC and the numbers for the ACT in 2001-02 have been revised in this report.

Calculating rates of detention per head of relevant population

The population estimates used to calculate the number of people aged 10 to 17 in detention, per 100,000 population aged 10-17, are taken from *Population by age and sex* (ABS 2004b) for 30 June of each year. For statistics from 1991 to 2000, Indigenous population figures are based upon high-level estimates, June 1996 to June 2006 (ABS 1998). For statistics from 2001 to 2004, Indigenous estimates are based upon high level estimates, June 2001 to June 2009 (ABS 2004). High-level estimates of the population are derived from projections of both natural population growth as well as an increased propensity for Australians to identify as Indigenous. The AIC uses high-level estimates for all figures relating to Indigenous detention rates, since these provide a more conservative estimate of rates and ratios.

The ABS does not publish these population estimates in the detail required for this report; the Australian Institute of Criminology purchases statistics from the ABS that are based on these projections. Prior to 1996, a number of different sources of Indigenous population figures were used.

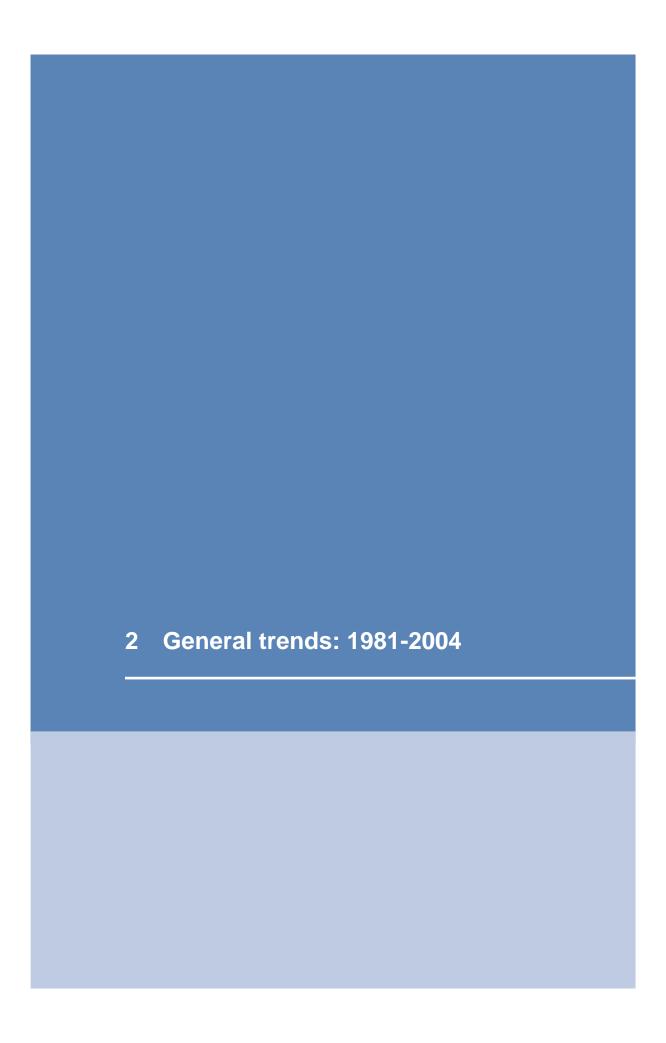

Indigenous overrepresentation

Indigenous overrepresentation refers to the fact that Indigenous persons in Australia are subject to higher rates of incarceration than non-Indigenous persons. Two methods may be used to calculate overrepresentation: the population ratio and rate ratio methods.

The population ratio refers to the proportion of Indigenous juveniles in juvenile detention centres compared with their proportion in the general population. For example, if Indigenous juveniles comprised two per cent of all juveniles in Australia, then we would expect, all things being equal, that they would make up two per cent of the detained juvenile population. If Indigenous juveniles actually made up four per cent of this detainee population, the ratio – using the population ratio method – would be 4/2=2, which can be expressed as "There were twice as many Indigenous juveniles detained as we might expect from their representation in the general community".

The rate ratio method refers to a comparison of two rates: the detention rate per 100,000 of Indigenous juveniles, and the detention rate per 100,000 of non-Indigenous juveniles. At 30 June 2004, there were 312.9 Indigenous juveniles detained per 100,000 Indigenous juveniles in the population. On the same date there were 12.2 non-Indigenous juveniles detained per 100,000 non-Indigenous juveniles in the population. Using these rates, we arrive at an overrepresentation ratio of 312.9/12.2=25.6, which may be expressed as "Indigenous juveniles were 25.6 times more likely than non-Indigenous juveniles to be detained in a juvenile justice centre".

This report uses the rate ratio method for calculating overrepresentation, as in the past (Charlton & McCall 2004; Bareja & Charlton 2003; Cahill & Marshall 2002; Carcach & Muscat 1998).

- There has been a general decline over the 24 years in the number and rate of persons aged 10 to 17 in juvenile detention in Australia. Table 2c demonstrates that at 30 June 1981, 1352 young people were detained, and at 30 June 2004, only 564 juvenile detainees were recorded. The greatest decline was noted between the years of 1981 and 1989, where the number of detainees reduced by 44 per cent to 759.
- Similarly to the trends observed in the numbers of persons aged 10 to 17 in juvenile detention, decreases in the rate of juveniles in detention have also been noted, with the rate declining by more than 50 per cent since 1981 (see Table 2c). At 30 June 1981 it stood at 64.9 detainees per 100,000 population and at 30 June 2004 it was recorded as 25.5 detainees per 100,000 population.
- There has been a 53 per cent drop in the number of male juveniles detained since 1981 (Table 2a) and an 82 per cent drop in the number of females detained since 1981 (Table 2b).
- Young men have always been highly overrepresented in juvenile detention, with young women
 consistently comprising only a small proportion of the total persons detained. At 30 June 2004
 young males were 12 times more likely than young females to be in detention.
- Table 2d demonstrates that the proportion of young females in detention has been declining, with females comprising eight per cent of juveniles in detention in 2004 compared with 17 per cent at 30 June 1981. The period of greatest decline was between the years from 1981 to 1991, where the percentage of the detainee population that was female decreased from 17 per cent to six per cent.
- Rates of juvenile detention since 1994 have decreased by 24 per cent for Indigenous juveniles and 50 per cent for non-Indigenous juveniles. However, Indigenous overrepresentation remains high, with Indigenous young people being 25.6 times more likely than non-Indigenous young people to be in detention at 30 June 2004.

Tables 3a and 3b provide information about the number of juveniles in detention in two age groups: 10 to 14 years and 15 to 17 years. It is clear that the vast majority (88%) of young people detained in juvenile facilities across Australia are in the older age group. However, Indigenous overrepresentation is apparent in these data, with Indigenous young people making up the majority of the 10 to 14 year age group in Queensland, New South Wales and Western Australia at 30 June 2004.

⁽b) Australian totals exclude Tasmania between 1997 and 2002

Tables in this section present data from the first quarter of 1994 to the second quarter of 2004. All jurisdictions were able to provide data on Indigenous status from the beginning of 1994 with the exception of Tasmania, whose Indigenous data are incomplete from the third quarter of 1996 through to the end of 2002. In this section, no Tasmanian figures are presented for either Indigenous or non-Indigenous persons from the 1995-96 financial year to 2003, and all Australian totals given by Indigenous status during this period exclude Tasmania (total persons figures include Tasmania). Similarly, rates calculated for Indigenous or non-Indigenous persons since 1996-97 have used population estimates which exclude Tasmania.

Figure 4a shows that the rates of detention for both Indigenous and non-Indigenous young people have been declining since 1994 (Indigenous rate down by 24 per cent and non-Indigenous rate down by 50 per cent). However, the ratio of Indigenous overrepresentation continues in a stable trend, with Indigenous persons aged 10 to 17 years still 25 times more likely to be in detention than non-Indigenous persons of the same age group.

Figure 4a: Rate of Indigenous and non-Indigenous persons aged 10 to 17 years in juvenile detention in Australia and Indigenous overrepresentation ratio, 1994-2004

^{*} Rate per 100,000 relevant population

Tables 4a, 4b, 4c and 4d provide data on the numbers and rates of young people in juvenile detention for each quarter since the beginning of 1994, broken down by Indigenous status and jurisdiction.

At 30 June 2004, there were 312.9 Indigenous persons per 100,000 aged 10 to 17 detained and 12.2 non-Indigenous persons per 100,000 aged 10 to 17 detained in detention centres across Australia.

^{*} Rate per 100,000 relevant population

Figures 5a through 5h illustrate the levels of overrepresentation of Indigenous young people in detention for each State and Territory since 1994. When examining these figures it is important to recognise that rates of detention per 100,000 population and the resulting overrepresentation ratios can be highly variable in States and Territories with:

- small populations of Indigenous people;
- · small numbers of people in juvenile detention; and/or
- small numbers of Indigenous people in juvenile detention.

These issues are particularly relevant to Tasmania, the Northern Territory, the Australian Capital Territory and Victoria.

It can be seen from the graphs that New South Wales depicts a trend most consistent with national figures. This is to be expected given that New South Wales, with its large population, impacts heavily on national trends. As at 30 June 2004 Indigenous young people were over-represented in detention in:

- Western Australia (Indigenous young people were 52 times more likely to be detained per population);
- New South Wales (Indigenous young people were 30 times more likely to be detained per population);
- Queensland (Indigenous persons were 23 times more likely to be detained per population);
- South Australia (Indigenous young people were 20 times more likely to be detained per population);
 and
- Victoria (Indigenous young people were 20 times more likely to be detained per population).

While levels of Indigenous overrepresentation remain high it is important to note that overrepresentation levels reflect numbers of Indigenous persons in detention relative to non-Indigenous persons. Figure 4a has already shown that overall rates of both Indigenous and non-Indigenous young people in detention per population have been decreasing since 1994. It is important to look at both rates of detention and overrepresentation ratios when assessing the involvement of Indigenous young people in detention.

Figure 5a: Level of Indigenous overrepresentation in juvenile detention in New South Wales, 1994-2004

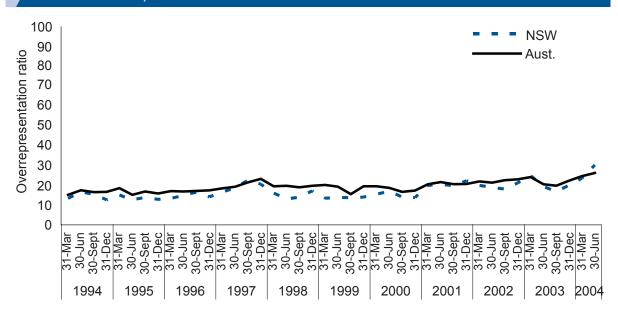

Figure 5b: Level of Indigenous overrepresentation in juvenile detention in Victoria, 1994-2004

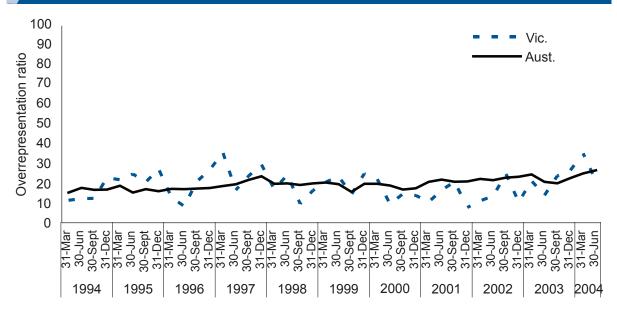

Figure 5c: Level of Indigenous overrepresentation in juvenile detention in Queensland, 1994-2004

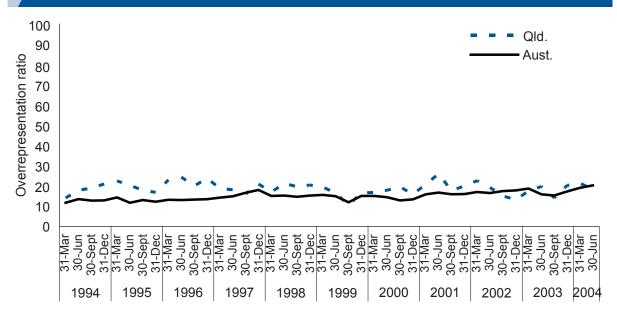

Figure 5d: Level of Indigenous overrepresentation in juvenile detention in Western Australia, 1994-2004

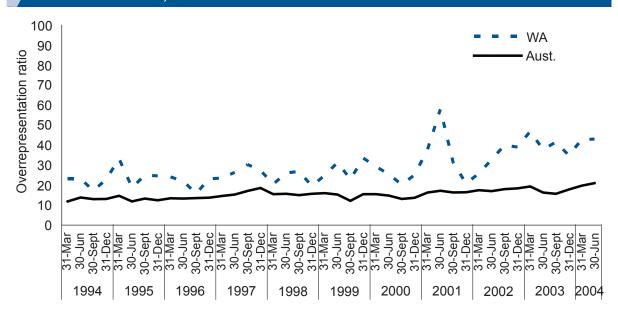

Figure 5e: Level of Indigenous overrepresentation in juvenile detention in South Australia, 1994-2004

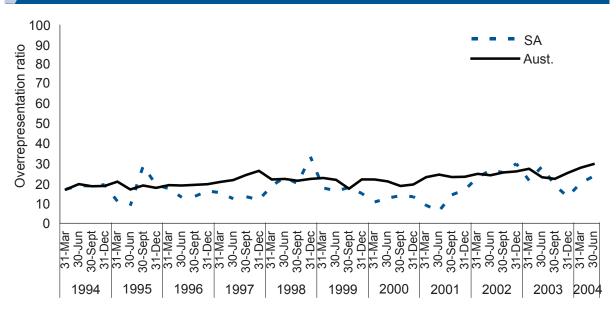

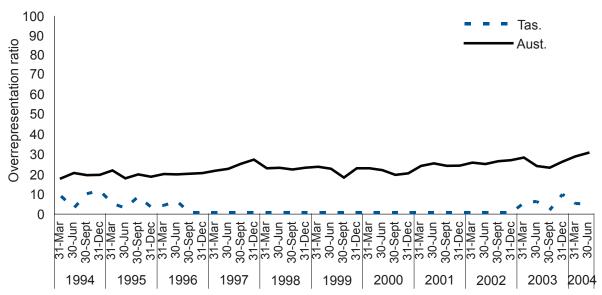

Figure 5f: Level of Indigenous overrepresentation in juvenile detention in Tasmania, 1994-2004^(a)

⁽a) Data unavailable between 30 September 1996 and 31 December 2002

Figure 5g: Level of Indigenous overrepresentation in juvenile detention in the Northern Territory, 1994-2004

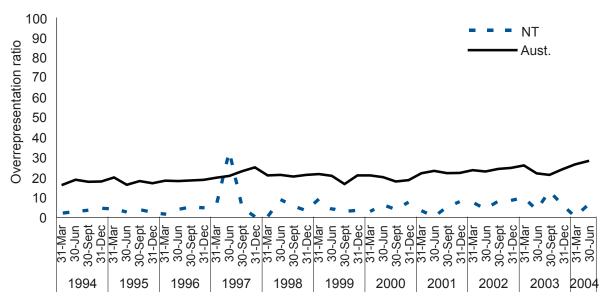

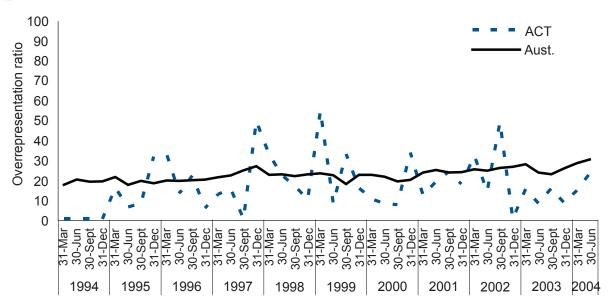

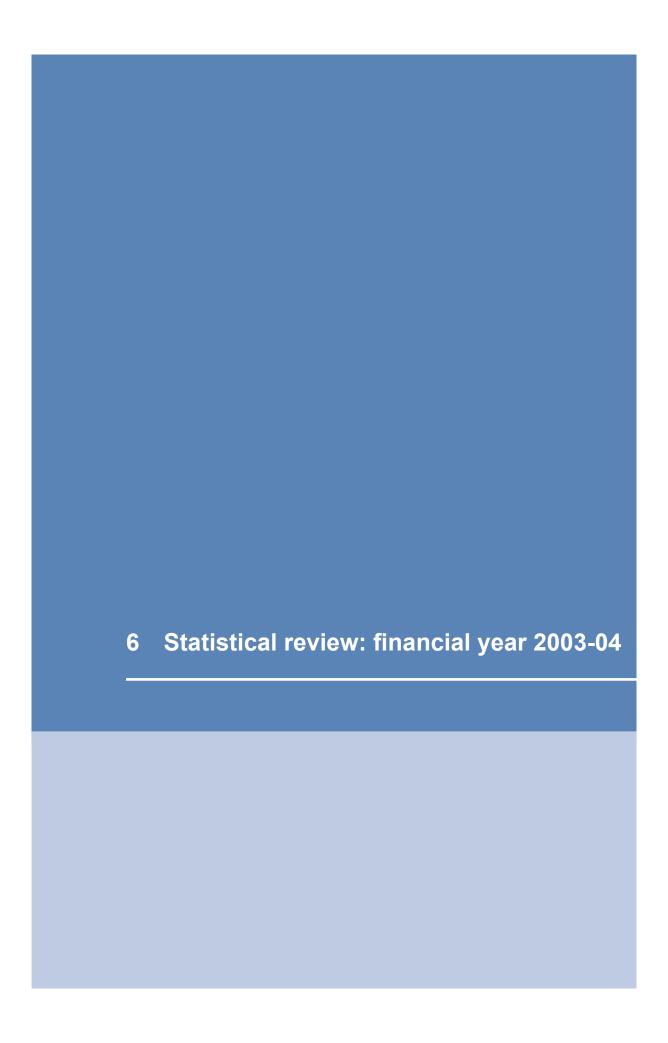

Figure 5h: Level of Indigenous overrepresentation in juvenile detention in the Australian Capital Territory, 1994-2004

Tables 6a, 6b and 6c present information on the number and rate of Indigenous and non-Indigenous people aged 10 to 17 in juvenile detention for the four quarters of the 2003-04 financial year. This information is provided by jurisdiction, and it can be seen that Western Australia had the highest rate of juvenile detention for Indigenous persons aged 10 to 17 at 30 June 2004 (654.6 per 100,000 relevant population), while the Northern Territory had the lowest rate of detention for Indigenous young people (74.3 per 100,000 relevant population). Queensland recorded the lowest rate of detention for non-Indigenous young people.

Persons remanded or sentenced, by jurisdiction

Table 7a shows the numbers of males and females aged 10 to 17 who were in juvenile detention due to being remanded or sentenced. Tables 7b, 7c and 7d show the proportions of juveniles in detention who were sentenced as opposed to remanded.

Over the 2003-04 year, Victoria had the highest sentenced proportions of detainees aged 10 to 17 years (Table 7d). This may be due to the diversionary focus of the Victorian juvenile justice system which aims to reduce instances of custodial remand. The next highest proportions of sentenced detainees were in Western Australia and the Australian Capital Territory. The lowest proportions of sentenced detainees over the year were in New South Wales and Queensland, where fewer than 50 per cent of detained juveniles had been sentenced.

Persons in detention aged 18 and over

Table 8 presents data on the number of persons in juvenile detention during 2003-04 who were above the defined age for a juvenile in this publication (i.e. aged 18 years and over). Jurisdictions vary in how young people are dealt with after reaching adulthood; that is, whether they can continue their sentence in juvenile detention, or are to be transferred to an alternative correctional facility.

New South Wales and Victoria have consistently had the highest number of 'adults' in juvenile detention, with both traditionally keeping detainees in juvenile facilities regardless of transition into adulthood. Victoria also has a dual track system for the adult court that allows offenders aged 17 to 20 appearing in the adult court to serve terms of detention in a juvenile justice facility.
